

## Testing Plan - ScheduleMe

### Test Strategy:

- Create test objectives for each task, followed by expected results, testing criteria, and the resources needed
- A person who starts a task creates a test objective
- Then the criteria are discussed as a group and created together
- Following with resources needed, which is also discussed but ultimately decided by whoever the test's scope falls on

### Test Objectives:

- The home page rendering correctly
- Successful Database Connection
- Login API success

### Test Criteria:

- Make sure that the features we are isolating are working correctly.

### Resources Needed:

- Docker
- Browser
- Database Access

Test Objectives	Test Criteria	Resources Needed
Make sure the home page renders correctly	Colors are showing Text appears and is legible Images are rendering	A browser
Make sure the login page successfully saves the new user	Successful login	Database User sign up before login
Make sure the register page saves new user data to the database	User data is in the database	Browser Database access(?)
